Would you like to study important social trends relating to families, migration, and health?

Are you interested in questions about the population? Perhaps you have a bachelor in social sciences, but you’d like to develop your skills in quantitative methods? Or maybe you would like to do an internship as a part of your education? If so, then we’d like to draw your attention to our two-year Master’s in Demography at the Stockholm University Demography Unit.

Demography is the study of human populations – their size, characteristics, and geographical distribution – and the process of population change. Demographers study the three ‘big events’ that determine population change: births, deaths and migration. Demography also draws extensively from related disciplines – sociology, economics, statistics, history, political science, psychology, public health and environmental sciences. Becoming a demographer will therefore give you a chance to use your entire education.

**Multidisciplinary Master’s Programme in Demography, 120 credits**

Our two-year multidisciplinary Master’s programme in demography contains five compulsory courses: Population Development and Social Change, Basic Demographic Methods, Population Processes, Event-History Analysis: Regression for Longitudinal Event Data and Research Methods. These can be combined with elective courses in demography, sociology and other topics. **Within this programme, you have the opportunity to apply for an internship at a workplace (15 or 7.5 credits).** At the end of the programme, you will write a master thesis of 30 higher education credits.

You can also choose to study our one-year Master’s Programme in Demography (60 credits). Please note that you cannot apply for an internship at a workplace within the one-year programme.

**Join our international environment in Stockholm!**
